

	VIDEO	AUDIO
1.	Suggested anchor lead-in: The use of e-cigarettes is on the rise among teenagers. These products are advertised as a healthy alternative to regular cigarettes but as Jack Trammell reports they are not at all what they seem to be.	
2.	Rob vaping	Voiceover: Rob Rodak started smoking e-cigarettes because of the convenience.
3.		Rob: 12:42:25- 12:42:35 (:10) I was working a job last year I where I wasn't allowed to smoke cigarettes on the job, so I got a few disposable e-cigarettes and that's how I got started
4.	Footage of Dr. Wilson	Voiceover: But if he thought it was because smoking e-cigarettes or "vaping" as it's called was harmless, Dr. Karen Wilson says that is just not true
5.		Dr. Wilson: 00:25:53 –00: 26:15 (:22) The byproduct of electronic cigarette – aerosol- is not harmless. We're learning much more about this and we now understand that it contains chemicals that could potentially be carcinogenic or cause cancer. In addition it contains nicotine which we know is dangerous at almost any level, especially for children.
6.	Dr. Wilson shots	Voiceover: The problem is these products aren't regulated like traditional tobacco products. This is something the American Academy of Pediatrics wants to change:
7.		Dr. Wilson: 17:07 –17:42 * We recommend that electronic cigarettes not be sold to anybody who is under the age of sale for regular tobacco products in that jurisdiction. The reason is that nicotine is addictive,

		particularly for adolescents and young adults. We know that anybody who start smoking before the age of 21 is far more likely to become a lifelong smoker.
8.	Vaping products	Voiceover: The AAP also wants to ban the candy-like e-flavors which are particularly attractive to adolescents. Rob, who is 21, agrees there should be tighter age restrictions for e-cigarettes.
9.	Rob with friends	Rob Rodak: 13:00:18 – 13:00:40 * (:22) I don't really like the e-cigarette marketing. It feels very, very targeted. It feels like they are also trying to hit younger audiences with very sweet, very candy- like flavors. And the convenience that it is odorless and it makes it very easy to hide from parents or authority figures.  13:01:38 – 13:01:44 * (:06) I think would be a really good idea to increase the age. As an 18-year-old I never would have agreed with that statement, but as a 21-year-old now who is been smoking for three years and feeling the effects of it. I wish that I had waited until I was 21 to start smoking.
10.		Voiceover: This is Jack Trammell.
11.	Suggested anchor tag: Proposed legislation also includes the requirement of childproof packaging to protect small children from the nicotine products which can be absorbed through the skin.	
12.		Additional soundbites:
13.		Dr. Karen Wilson 4:52-5:19 one of the scariest things that we have

	VIDEO	AUDIO
		been seeing is are the numbers of adolescents who are using electronic cigarettes and will never use combustible cigarettes before and then go on to use combustible cigarettes going on. So rather than rather be away for children or teenagers is a way for adults is a way to stop smoking cigarettes. It's an entryway for children who will start to smoke cigarettes
14.		Dr. Karen Wilson 24:06 – 24:24 So we know that the aerosol that comes out of the electronic cigarette can fall on floors and deposit nicotine and other chemicals in areas where children may be crawling and a child who crawls can get the chemicals and nicotine on their hands and can ingest it. We know that nicotine at any level is dangerous to children.
15.		Rob Rodak: 12:50:39- 12:50:56 I think it's probably for the best that we should be paying more attention to these things and trying to keep tobacco and E cigarettes and these little bit more adult life choices.. and make it harder for younger people to get to them.
